Dear Webasto user

We presume that the principle and mode of operation of your new heater has been explained to your complete satisfaction by the workshop/service centre which installed the heater. These operating instructions once again give you an overview of how to use the Thermo Top P heater as well as the Telestart T70/T80 hand-held transmitter and digital timer.

The water heater Thermo Top P has been type-tested and approved in accordance with Directives 2001/56/EC (heaters) and 72/245/EEC (EMC) within the territory governed by European Directive 70/156/EEC.

The units must be installed in accordance with the enclosed installation instructions.

**Thermo Top P Telestart**

**General information**

We presume that the principle and mode of operation of your new heater has been explained to your complete satisfaction by the workshop/service centre which installed the heater. These operating instructions once again give you an overview of how to use the Thermo Top P heater as well as the Telestart T70/T80 hand-held transmitter and digital timer.

**Maintenance and safety instructions**

The water heater Thermo Top P has been type-tested and approved in accordance with Directives 2001/56/EC (heaters) and 72/245/EEC (EMC) within the territory governed by European Directive 70/156/EEC.

The units must be installed in accordance with the enclosed installation instructions.

**The heater must not be operated:**

- In filling stations and tank farms.
- In places where explosive vapours or dust may build up (e.g. near fuel, coal, wood dust or cereal stores).
- In enclosed rooms (e.g. garages), not even via the timer or Telestart.

**The heater must not:**

- be exposed to temperatures of more than 120 °C (storage temperature), otherwise the electronics may suffer permanent damage.
- be operated without at least 20% brandname anti-freeze in the water of the heating circuit.

---

**Fault description**

- Heater switches off automatically (= fault lock-out).
  - Possible cause: No combustion after starting and restarting. Flame goes out during operation.
  - Remedy: Switch off heater and switch on again (not more than twice).

- Heater does not switch on.
  - Possible cause: Heater is without electric power.
  - Remedy: Check power supply to heater and ground connections.

- Heater switches off during operation (= fault lock-out).
  - Possible cause: Heater has overheated due to lack of coolant.
  - Remedy: Refill coolant as directed by manufacturer.

**To cancel the fault interlock**

Interrupt power supply by removing the 20 A fuse (yellow) in the heater cable harness.

Briefly press ON button on transmitter on left or press button on timer.

Refit power supply by removing the 20 A fuse (yellow) in the heater cable harness.

Refit the fuse. The heater switches on again.

Wait approx. 3 s

Refit the fuse.

The heater switches on again when the fuse is refitted.

Please contact a Webasto service centre if the fault cannot be remedied in this way.
